Centerless Grinder: Rebuilding - Sales - Parts - Service

4/27/20

To whom it may concern:

The aerospace fastener industry has long relied on heavily chlorinated mineral oils to produce its parts. These oils have several negative drawbacks on the long-term performance of our machine tools. Furthermore, the low flash point of these oils is a concern, especially when grinding titanium.

Allways Precision has tested Condat Neat Green oils during runoffs on aerospace fasteners with several major companies. We have had good success using these oils to grind all types of aerospace alloys, including titanium. Furthermore, we have never experienced a fire even when grinding in severe conditions.

We would recommend customers use Condat products in our machines and encourage them to test it out as we believe it to be a good solution for this challenging industry.

Regards,

Alex Vanderberg
